DETAILED ACTION

1. This action is in response to the communication filed 4/14/2009.

Allowable Subject Matter

2. Claims 3, 10, 11, 12, and 14-21 are allowed.
3. The following is an examiner's statement of reasons for allowance:
4. As to Claim 3,
5. The primary reason for the allowance of claim 3 is the inclusion of the rotor including a flat portion on a portion of a circumferential surface of the inner ring which opposes and is sensed by the plurality of polar teeth and is an outer peripheral shoulder of the inner ring. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.
6. As to Claim 10,
7. The primary reason for the allowance of claim 10 is the inclusion of the rotation detector including a rotor provided on the rolling element, a stator provided on the non-rolling element, and an exciting winding and output windings wound to the stator, wherein the output windings output the induced voltage according to a gap permeance between the rotor and the

stator in response to the exciting voltage inputted to the exciting winding, and the rotor being formed by at least one notch provided at an area on the intermediate circumferential surface of the hub wheel. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

8. As to Claim 11,

9. The primary reason for the allowance of claim 11 is the inclusion of the rotation detector including a rotor provided on the rolling element, a stator provided on the non-rolling element, and an exciting winding and output windings wound to the stator, wherein the output windings output the induced voltage according to a gap permeance between the rotor and the stator in response to the exciting voltage inputted to the exciting winding, the rotor being formed by notches provided at a plurality of areas on the intermediate circumferential surface. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

10. As to Claim 12,

11. The primary reason for the allowance of claim 12 is the inclusion of a generator for generating a voltage using energy provided by relative rotation of the rolling element relative to the non-rolling element and inputting the voltage as an input exciting voltage to the rotation detector, the generator having a first portion mounted to the inner bearing ring and a second portion mounted to the outer bearing ring. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

12. As to Claim 15,

13. The primary reason for the allowance of claim 15 is the inclusion of a generator for generating a voltage using energy provided by relative rotation of the rolling element and the non-rolling element, and inputting the voltage as an input exciting voltage to the rotation detector while supplying the voltage as a driving voltage to the radio transmitter. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

14. As to Claim 21

15. The primary reason for the allowance of claim 21 is the inclusion of an exciting winding and output windings disposed on the stator, and the rolling element is an inner ring of a bearing and the non-rolling element is an outer ring of the bearing, and the rotor is formed of the inner ring and includes a flat portion of an outer circumferential surface of the inner ring sensed by the stator. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

16. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
